

AN ACCIDENT OR A GREAT DESIGNER?

There are some scientific questions we must address about evidence of a Creator. Our planet is strategically placed the right distance from the sun in a perfect orbit that does not vary at all. If the earth were farther from the sun, the planet would be frozen, and no life could exist. Also, if the planet were closer to the sun, it would burn up with everything on it. So, we must consider, did this happen by chance? *The odds are overwhelming.*

Another question is regarding the atmosphere on earth. It is made up of gases which include 78% Nitrogen, 21% Oxygen and 1% Argon. It is designed to sustain life as oxygen is necessary for animals and people, and nitrogen is necessary for plant life. And we also know that plant life is necessary for human consumption. To believe in Evolution, you must believe the mix of oxygen and nitrogen happened by chance. Also, the placement of the earth from the sun must be by chance as well. *The odds that these things happened by chance are astronomical.*

Then we must ask about gravity. Imagine life on earth without gravity to keep us from floating into outer space. Gravity is necessary to allow us to plant, work, eat, hunt, fish and all the things we do without thinking. Water would not stay in the oceans, lakes, or rivers without gravity. *The odds of these things happening by chance are beyond the reach of a rational mind.*

Revelation 4:11 states, **“Thou art worthy, O Lord, to receive glory and honour and power: for thou hast created all things, and for thy pleasure they are and were created.”**
